PROFILE

Self-motivated and highly passionate student seeking to invigorate university's student body with proven leadership and organizational skills and contribute strongly to learning Computer Science to develop skills demanding tact, enthusiasm, and an exemplary work ethic.

EDUCATION

B.Tech Honours Cse Core 2022-26
Manipal Institute Of Technology,Bangalore
CGPA:8.5/10 Among Top 5% of the batch

Class XII (HSC) 87% Rank 10 in Junior College, Batch Size 200,2022

Class X (ICSE) 98.6% Rank 3 in City, Rank 2 in school, Batch size 300,2020

WORK EXPERIENCE

June 2024 - PRESENT

National University of Singapore-Research Internship

Research Intern-Under Professor Matthias Wacker

- Data Collection: Scraped drug formulation data from PubMed and PubChem to extract information on phospholipids used in targeted drug delivery systems.
- Phospholipid Identification: Analyzed datasets to identify phospholipids present in various drug formulations.
- NLP Integration: Leveraged NLP techniques to extract and classify phospholipid-related data from scientific literature.
- Ranking Mechanism: Developed an algorithm to rank phospholipids based on their frequency and significance in drug formulations.
- Correlation Analysis: Explored relationships between phospholipids and drug delivery efficiency using data analytics tools.

Apr 2024 -July2024

Anunta Tech · Mumbai, India

Cloud Computing Operations Intern

- Managed client interactions and delivered cloud services Enhanced skills in Microsoft Azure, covering cloud computing concepts, core Azure services, security, privacy, Compliance and trust. · Acquired proficiency in Azure pricing and support, virtual machines, networking, identity management, and implementing Azure policies · Gained in-depth knowledge of SaaS, PaaS, and IaaS, including deploying and managing resources in these models. · Took initiative in troubleshooting issues, optimizing solutions, and streamlining processes to improve service efficiency.

SKILLS

- Cloud Computing with Azure
- Data Structures and Algorithms
- Python Programming and OpenCV
- Prompt Engineering and ChatGPT
- Java Programming
- Data Analysis using Numpy,Pandas
- Web scraping(Static/Dynamic) using Selenium and BeautifulSoup
- Machine Learning

LANGUAGES

- English(Advanced)
- Hindi(Advanced)

PROGRAMMING LANGUAGES

- Python
- Java
- C
- SQL
- Dart

P R O J E C T S

July 2024 - PRESENT

1. Amphibian Adventure-Identification of frog species in the western ghats
Objective: Developed a machine learning model to identify frog species found in India, particularly in the Western Ghats, using image classification techniques.
Dataset Creation: Curated a custom dataset of frog species by collecting images and metadata from public sources and expert research, ensuring dataset diversity.
Technology Stack: Leveraged EfficientNetV2 for precise image classification and OpenCV for preprocessing and feature extraction.
Advanced Features: Incorporated fuzzy matching techniques to interpret partial locality names (e.g., "Koyna") and descriptive features (e.g., "brownish color") to enhance identification accuracy.

2. Phospholipids in Drug Delivery Project
Objective: Investigated the role of phospholipids in drug formulations using NLP and data analytics to support targeted drug delivery mechanisms.
Data Collection: Scraped PubMed and PubChem for drug formulation data, extracting mentions of phospholipids and their properties.
NLP Integration: Used text analytics to process research articles, classify phospholipids, and identify their relevance to specific drugs.
Ranking Algorithm: Created an algorithm to rank phospholipids based on their occurrence and importance in drug formulations.
Correlation Analysis: Analyzed relationships between phospholipids and drug delivery performance, providing insights for pharmaceutical applications.

3. Email Automation Project
Objective: Created a Python-based tool to automate email communication for academic and professional purposes.
Features: Integrated Selenium and Beautiful Soup to dynamically extract professors' contact details from static and dynamic websites. Added functionalities for personalized content, file attachments, and email scheduling.
Use Case: Streamlined bulk and targeted communication with enhanced accuracy and efficiency.

Apr 2024-June 2024

4.Amazon Clone: Built a simple e-commerce app with product listings, search, and shopping cart using HTML, CSS, and JavaScript.
5.Coffee Machine Simulator: Developed a Python-based virtual coffee machine to manage resources and dispense beverages.
6.Hangman and Snake Games: Created a word-guessing game and a dynamic Snake game with Python and the Turtle library.

Feb 2024-Apr 2024

7. Template Matching and Fire Detection
Template Matching: Developed an object detection system using OpenCV to identify specific elements in game environments, incorporating algorithms to handle variations in size, rotation, and scale for accurate recognition.
Fire Detection: Built a real-time alert system with OpenCV and Python to detect fire hazards by analyzing video frames for flame height and intensity.
Integrated a threshold-based alarm that triggers when these parameters exceed a predefined safety level.
